

## A Guide to Remote Integration (REMI)

Picture yourself producing a live production from anywhere in the world

This guide provides the tools needed to remotely control and preview PTZ cameras, video switchers, plus start/stop recording and streaming encoders.

Here are three products and services from Datavideo that will enable you to produce remote events:

The BB-1 Kit provides remote access of Datavideo devices over the internet and acts as a DHCP server, automatically assigning IP addresses to all connected devices. BB-1's can eliminate the need for IT professionals by virtually assigning and **managing up to five Datavideo devices.**

dvCloud is a cloud based streaming management service designed to stream to multiple platforms, record, and remotely control Datavideo devices that are connected using BB-1's.

DVIP automatically identifies IP addresses and connects Datavideo products over a standard network.

Remote

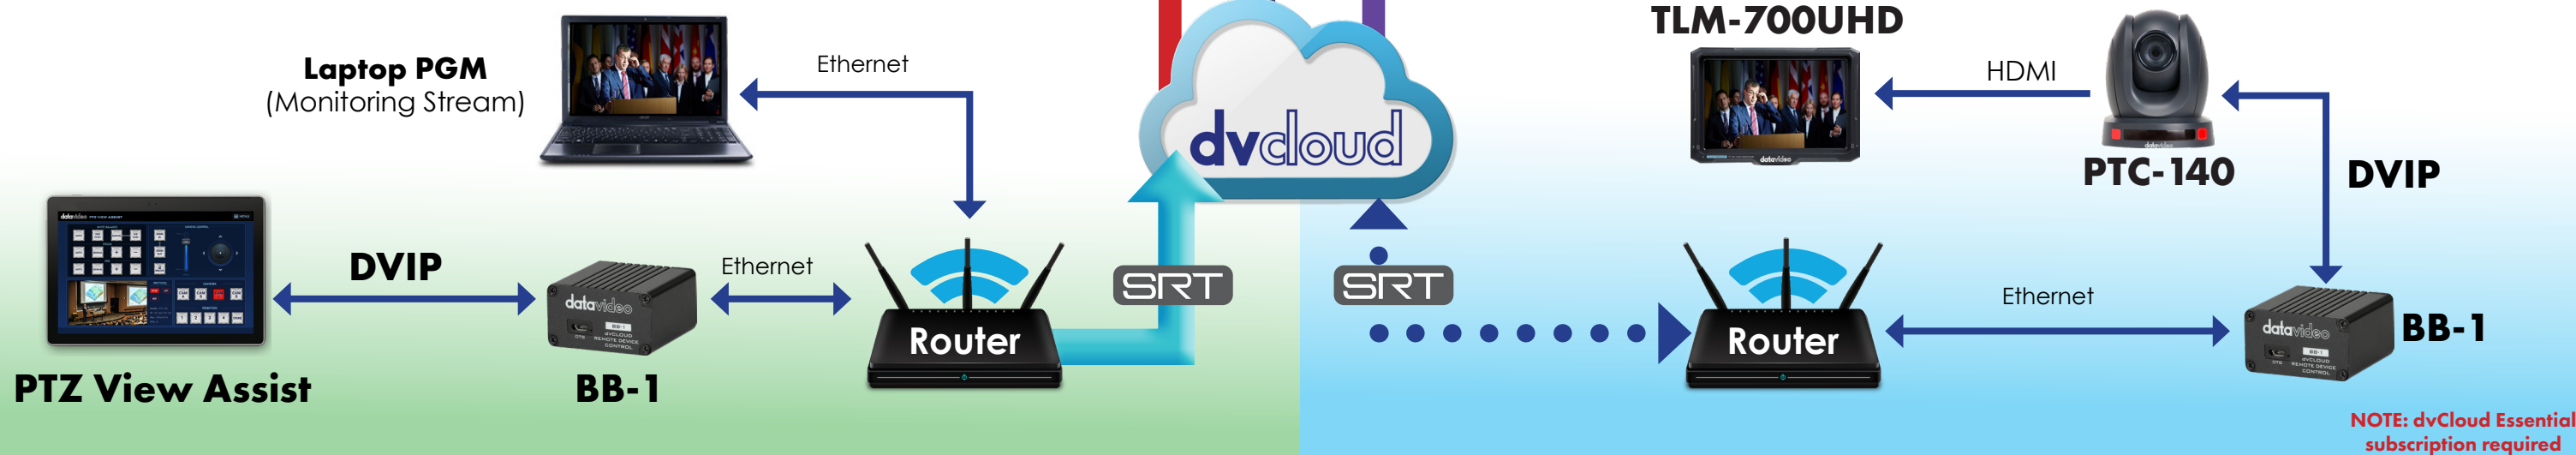

# Remote Camera Control

Live Venue

The BB-1 uses DVIP to automatically detect Davavideo's camera control app and connect it in dvCloud.

The BB-1 uses DVIP to automatically detect the PTC-140 camera and connect it in dvCloud.
