

Faded Film Color Restoration

Faded or Yellowed Film

- If the film is not well-preserved and is exposed to conditions such as humidity, high temperatures, and direct sunlight, it may accelerate the aging of the film, resulting in color changes, particularly yellowing, in the scanned images.

Faded Film Color Restoration

- However, through the 'Faded Film Color Restoration' technology in Cyber View, you can correct the scanned yellowed images and restore more realistic colors.
